Application No.	:	09/425,387 Reissue	Confirmation No.	Not assigned
US Patent No.	:	6,274,684		
Applicant	:	Donald R. Loveday, et al.		
Filed	:	October 22, 1999		
TC/A.U.	:	1713		
Examiner	:	William K. Cheung		
Docket No.	:	1999U026.RE		
Customer No.	:	25959		

**Commissioner for Patents**  
**P. O. Box 1450**  
**Alexandria, VA 22313-1450**

**INFORMATION DISCLOSURE STATEMENT**

Sir:

In accordance with Title 37, Sections 1.56, 1.97 and 1.98 of the Code of Federal Regulations, and pursuant to Applicants' duty of candor and good faith toward the United States Patent and Trademark Office, the Examiner's attention is drawn to the art indicated on the attached PTO-1449 form.

Form PTO-1449 is attached to this paper listing documents submitted in the above related case. It is respectfully requested that these documents be considered by the Examiner and an initialed copy of each form be returned to the Agent of record.

This disclosure statement should not be construed as a representation that a search has been made or that no other material information, as defined in 37 CFR § 1.56(a) exists.

A copy of each document is enclosed. Some of the documents may have markings thereon. No significance is meant to be attached to the markings.

We believe that this disclosure complies with the requirements of 37 CFR § 1.56, 1.97 and 1.98 and the Manual of Patent Examining Procedures § 609. If for any reason, the Examiner considers the disclosure or documents to not comply with these sections, notification is respectfully requested.

EP 0 893 454 A1 suggests bidentate or tridentate transition metal amide compounds as olefin polymerization catalysts. This document does not disclose mixing such organometallic catalyst compounds with other catalysts.

Japanese Laid Open Patent Application 10-330412 (330,412/1998) suggests combining bidentate or tridentate transition metal amide compounds in combination with a transition metal compound from Group 4 of the Periodic Table that contains a ligand that has the cyclopentadienyl skeleton and activators as purportedly suitable for olefin polymerizations. This document does not disclose addition of the disclosed catalyst mixtures to a polymerization reactor in one of a slurry, dispersion or suspension.

US 5,318,935 suggests bridged and unbridged amido transition metal compounds of the Group IV-B metals, and a catalyst system comprising an amido transition metal compound and an alumoxane, and a process using the catalyst system for the production of high molecular weight polyolefins and particularly, high molecular weight isotactic polypropylene. This document does not disclose mixing such bridged or unbridged amido transition metal compounds with other catalysts.

US 5,506,184 suggests a transition metal complex that contains with a bidentate or tridentate ligand and a cocatalyst mixture containing dialkylaluminum halide and dialkylmagnesium that is purported to be useful for olefin polymerization and copolymerization. This document does not disclose mixing such bidentate or tridentate transition metal complexes with other catalyst compounds.

Applicants request that the Examiner contact the Applicants' Agent if there are any matters or issues outstanding.

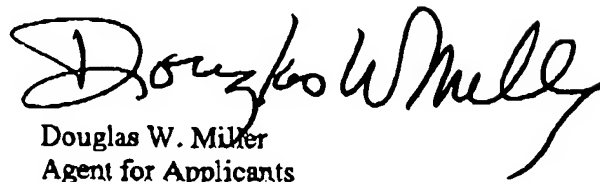

Application No. 09/425,387  
Attorney Docket No. 1999U026.RE.US  
IDS dated January 20, 2004
